

## Software Support for macOS 11 (Big Sur)

Starting with macOS 11 (Big Sur), Apple has a new policy that requires significant changes to how our software works. After updating to macOS 11 Logitech Control Center (LCC) software will not display any of the Logitech supported devices connected to your Mac and certain devices will have minor issues in Logitech Options.

We are currently working towards supporting your device in our upcoming releases of Logitech Options. Refer to [this link](#) to keep yourself updated and see below for the affected Logitech devices.

If you need to contact support, please use this form:

[www.logitech.com/support/bigsursupport](http://www.logitech.com/support/bigsursupport)

We are now working on updates to our primary software, but for now, we recommend users should stick with macOS 10.15 or lower to use our products.
